

Food transport trolley

Metos Thermobox SS180

Metos Thermobox SS180 food transport trolley can be used in various ways to transport food. The trolley has two cabinets stacked on top of each other. The S models do not have their own heating function or cooling function, so the trolley is neutral and suitable for short-term food storage. The storage time for refrigerated food transports can be extended by using a separate cooling pack and storing the trolley in a cold room (with the door open) before transport.

The trolley is insulated with polyurethane, which expands under high pressure and unites the trolley's construction and the inner chambers into a strong and well-insulated unit. The trolley's energy-efficient insulation ensures safe and high-quality conditions for storage and transport of food.

The trolley can be used in small spaces. The trolley is easy to clean as its inside is completely made of stainless steel and has pressed GN guides without any joints. Large rubber wheels as well as bumpers and ergonomic handles around the trolley makes the trolley easy to handle and light. The robust doors opens comfortably by pulling the handle, which is integrated in the trolley frame. The door opens to the side, 270 degrees.

- the capacity of the cabinet are 6xGN1/1 + 6xGN1/1, guide distance 80 mm, the inner dimensions of the cabinet: 330x540x510+510 mm mm
- Ø160 mm wheels, two rotating with brake and two directionally locked without brake
- the wheel bracket is made of hot-dip galvanized steel
