1. General

Carefully read the instructions in this manual as they contain important information regarding proper, efficient and safe installation, use and maintenance of the appliance.

Keep this manual in a safe place for eventual use by other operators of the appliance.

The installation of this appliance must be carried out in accordance with the manufacturer's instructions and following local regulations. The connection of the appliance to the electric and water supply must be carried out by qualified persons only.

Persons using this appliance should be specifically trained in its operation.

Switch off the appliance in case of failure or malfunction. The periodical function checks requested in the manual must be carried out according to the instructions. Have the appliance serviced by a technically qualified person authorized by the manufacturer and using original spare parts.

Not complying with the above may put the safety of the appliance in danger.

1.1. Symbols used in the manual

This symbol informs about a situation where a safety risk might be at hand. Given instructions are mandatory in order to prevent injury.

This symbol informs about the right way to perform in order to prevent bad results, appliance damage or hazardous situations.

This symbol informs about recommendations and hints that help to get the best performance out of the appliance.

1.2. Symbols used on the appliance

This symbol on a part informs about electrical terminals behind the part. The removal of the part must be carried out by qualified persons only.

1.3. Checking the relationship of the appliance and the manual

The rating plate of the appliance indicates the serial number of the appliance. If the manuals are missing, it is possible to order new ones from the manufacturer or the local representative. When ordering new manuals it is essential to quote the serial number shown on the rating plate.

2. Safety

2.1. Safe use of the appliance

Because the bratt pan is a heated appliance that has hot surfaces during normal use, the following warnings and instructions must be followed to avoid burns:

- During long-time operation even the sides of the frying surfaces, the pouring nose and the lid get hot.
- For safe frying, always use heat protective gloves and appropriate accessories.
- Look out for discharging steam when opening the lid, especially when simmering or stewing.
- Do not leave the bratt pan on for long periods totally without supervision.

It is strictly forbidden to use bratt pan as a deep fat fryer.

2.2. Safety instructions in case of malfunction

Switch off the appliance if it is damaged or malfunctioning. Contact authorised service personnel using original spare parts for service of the appliance.

2.3. Disposal of the appliance

The destroying of the appliance when the end of its economical lifetime has been reached must be carried out in accordance with local rules and regulations. Taking care of substances that might be harmful to the environment, if not properly handled, and utilization of reusable materials is best done by using professional personnel specializing in recycling.

3. Functional description

3.1. Intended use of the appliance

Futura bratt pan is intended for heating, frying and stewing of food.

3.2. Use for other purposes

Use of the appliance for other purposes than stated above is prohibited.

The manufacturer of the appliance takes no responsibility for situations that may occur if warnings and instructions in this manual are neglected.

3.3. Operating principle

The frying surface of the bratt pan is heated by specially designed heating elements that are controlled by a thermostat. The yellow pilot light goes off when the preset frying temperature is reached.

In the largest bratt pan Futura 110, the frying surface is divided into two frying zones. The temperatures of both zones can be controlled individually.

The tilting of the bratt pan is electrical and is controlled by push buttons in the control panel.

The bratt pan models with letter **M** in the type marking refers to manual tilting. Tilting is self blocking and is done by the means of a hand wheel.

The bratt pan models with letter **H** in the type marking are equipped with the possibility to adjust the working height of the bratt pan.

The bratt pan models with letter **W** in the type marking are equipped with the possibility to fill bowl of the bratt pan by cold water.

The bratt pan models with letter **S** in the type marking have the bottom of the bowl made from clad steel. External (frying) surface of this bottom is stainless, internal surface is made from construction steel.

The bratt pan models marked with letter **P** are for wall installation.

4. Operation instructions

4.1. Before use

4.1.1. Preparing the use

The frying surface of the bratt pan is protected with a thin layer of grease during storage and transportation. Before first-time use the grease must be removed by using hot water and detergent.

After the cleaning, the frying surface must be burned in with salt-free grease. Heat up the pan to 200°C keeping the lid closed. Burn the grease for 5-10 minutes, let the pan cool down and wipe off excessive grease. Repeat when necessary. Do not use oil for burning. Heated oil would create a tough surface, which is difficult to clean. A well greased pan reduces fat consumption in frying and minimizes burning of foodstuffs.

4.2. Operation

4.2.1. Switching on the bratt pan

During the installation, a mains switch may have been fitted near the bratt pan, often on a wall nearby. Check that the mains switch is in the ON position.

The bratt pan is controlled from the operating panel and with the hand wheel (M).

The pan is switched on by turning the thermostat knob to the desired frying temperature, whereafter

- the heating-up starts
- the green pilot light goes on
- the yellow pilot light goes on, and it goes off when the preset temperature is reached (only Futura 110 models are fitted with two thermostats).

Operating panels

Futura 60, 85 M

Futura 110 M

Operating panel

1. Green pilot light PAN SWITCHED ON
2. Yellow pilot light TEMPERATURE
3. Temperature adjustment (Futura 60, 85, 110)
4. Temperature adjustment (Futura 110)
5. Pan bowl tilting
6. Return pan bowl to working (horizontal) position
7. Decrement of bratt pan height (optional)
8. Increment of bratt pan height (optional)
9. Water filling (optional)

Heating up to the frying temperature takes about 5-6 minutes. When the preset frying temperature is reached, the yellow pilot light goes off.

If there are longer interruptions in the electricity distribution, the thermostat (both thermostats on the Futura 110 models) should be set to the 0 position. This should be done in order to prevent unexpected start-up of the pan when the electricity distribution is restored.

Due to the very short preheating time of the bratt pan, energy can be saved by not switching the pan on until the frying is started. If there is a longer pause during the frying, the bratt pan can be switched off or the temperature can be set to a lower value. Energy can also be saved by keeping the lid closed always when possible, for instance when simmering or stewing.

4.2.2. Setting of the frying temperature

The frying temperature can be changed by turning the thermostat knob to the desired temperature. When lowering the temperature, some time will be needed for the frying surface to cool down. Increasing of the temperature turns on the yellow pilot light. When the new temperature is reached the light goes off.

On the Futura 110 model, the frying surface has been divided into two frying zones that can be controlled separately. This makes it possible to fry two product types requiring different frying temperatures at the same time. By turning the thermostat to the 0 position, the other zone can be switched off when lower frying capacity is needed.

During long-time use, heat is transferred from one zone to the other. Although one zone would be switched off, it gets gradually warm, reaching a temperature that is about half of the temperature of the heated zone. If so desired, the temperature of this zone can be checked by turning the thermostat knob to a position where the yellow pilot light goes on.

Max. possible working temperature for this model of bratt is limited up to 250°C. It is not possible to set working temperature over 250°C. The rotating knob of the thermostat will not go over mark "250°C". Do not try to apply force to override this mark.

4.2.3. Frying temperature

Guiding temperatures for various products:

Fried eggs	150°C
Omelette	160°C
Fish	170°C
Bacon	150°C
Meat cubes	170°C
Meat balls, depending on size	130°C...170°C
Hamburgers, Depending on size	130°C...170°C
Veal fillet	170°C
Wiennasteak	170°C
Thin steak of veal	220°C
Broiler, big pieces	150°C
Floured slices of liver	170°C
Chops	170°C
Sausage cubes	130°C...150°C
Frankfurters	150°C
Fried potatoes	150°C...170°C
Mushrooms	130°C...150°C
Onion	140°C
Small pancakes	170°C

4.2.4. Tilting

Before tilting or returning the bratt pan bowl to the working position, check that nothing is in the movement area or leaning against the moving part of the bratt pan.

The tilting of the pan bowl is operated with a push button (Figure "Operating panel" in Section "Switching on the bratt pan").

To tilt pan bowl at desired angle push and hold "tilting" button. To return pan bowl to working (horizontal) position push and hold "return" button until pan bowl stop.

The pan cannot be tilted while the lid is closed.

When tilting the pan bowl, the heating is switched off and will be switched on again when the pan is in the horizontal position.

4.2.5. Adjustment the working height

Before adjusting the working height of the bratt pan, check that nothing is in the movement area or leaning against the moving part of the bratt pan.

Adjustment of working height is possible in bratt pan models with additional letter H included in model marking. These models have two additional push buttons on the operating panel for the option (Figure "Operating panel" in Section "Switching on the bratt pan").

Adjustment is not possible if pan bowl is in tilted position.

4.2.6. Filling the water

Filling the cold water is possible in bratt pan models with additional letter W included in model marking. These models have additional push button on the operating panel for the option (Figure "Operating panel" in Section "Switching on the bratt pan"). To fill the water push and hold button until required amount of water collected.

Filling the water is possible when lid of the bratt pan opened.

4.3. After use

4.3.1. Cleaning

Burned deposits on the frying surface of the pan form an isolating layer which slows up the frying and creates poor frying results. A clean frying surface is a must for good-quality results.

The effect of burned deposits on the surface temperature: 2 mm of deposits lower the surface temperature with 24 %.
180°C about 135°C

Cleaning equipment: scraper, hard brush, scouring plate, towel, kitchen paper

Cleaning detergent: slightly alkaline detergent (pH 8-10)

Cleaning method: scraping, dry, wet, damp

Precleaning:

Scrape out frying remains and wipe out grease and loose remains with paper. When necessary, pour hot water into the pan and let soak.

Cleaning:

The inside of the pan is cleaned with a brush and hot water. Spots are removed with a scouring plate. Cleaning detergent should be used only for frying surfaces extremely covered with burned deposits, because it removes grease from the frying surface.

Inner and outer surfaces of the lid are cleaned with a brush and cleaning detergent solution.

The base and outer surfaces of the pan are cleaned with a brush and cleaning detergent solution and rinsed with water.

The frying surface of the pan is rinsed with hot water, dried by heating up and greased with salt-free grease. All other surfaces are rinsed and wiped dry.

Water usage on the control panel and the electric box must be avoided.

Use of a water hose or pressure cleaning jet is strictly forbidden.

In order to remain in good condition, the frying surface must be burned with salt-free grease when the pan is taken into use for the first time, and after that at intervals during use. This is especially necessary in connection with thorough cleaning.

4.3.2. Service

Switch the appliance off if it is damaged or is malfunctioning. Contact authorized service personnel using original spare parts for service of the appliance.

The appliance does not include any user serviceable parts inside. Service must be left to authorized service personnel.

5. Installation

5.1. Transporting and unpacking the bratt pan

The best way to move the bratt pan is to keep it in its own package as long as possible while it also protects the pan from outer damage. If it is necessary to unpack the pan, possible lifting must thereafter be done from the bottom frame of the base by using suitable spacers of wood. In order to avoid damage, it is not allowed to use the lid as a workbench during installation.

5.2. Positioning the bratt pan

The installation is started by moving the pan exactly to the right installation spot considering a possible floor drain. The distances needed are shown in the installation drawing. For service, most pans can be accessed from the front.

Thereafter the pan is adjusted into a horizontal position by turning the adjustable legs. The correct position is checked from the frying surface, not from the outer edges of the pan.

When the bratt pan is on the correct location and in a horizontal position, it must be bolted to the floor, the land models by the flanges in the rear adjusting legs and the marine models by all four leg flanges.

5.3. Installation on the wall

As an option Futura Bratt can also be ordered with cantilever installation on the wall, model P. The bratt pan is supplied with special wall brackets

The bratt pan is delivered with wall brackets factory installed into the pan base. Brackets must always be detached before installation and fastened to the installation wall by screw connections. Screw connections must be of following thread size:

- diam 12mm for screws with strength class (ISO property class) 8.8 and higher
- diam 20mm for screws with strength class (ISO property class) below 8.8

Brackets are delivered with mounting holes diam 14 mm (suitable for thread diam 12mm).

If In case 20 mm screws are used, the holes must be drilled up to dia. 22mm.

Brackets can be detached after lifting bratt pan above floor level and unscrewing two fixing screws on each bracket. It is recommended to use suitable wooden spacers between base of bratt pan and fork lift while lifting.

After fastening to the wall support surface of left and right bracket should be in horizontal position and collinear to each other.

When wall brackets properly fastened to the wall place bratt pan on it and fix by fixing screws.

The installation wall should be of sufficient strength to carry weight of bratt pan with product, wall brackets and all additional accessories. Total weight of bratt pan with all accessories and wall bracket without product is as follows:

- Futura 110PDEHW 225kg
- Futura 85PDEHW 200kg

Other requirements, given in installation drawings T03677D3, T03693C3 and Installation and Operation Manual should also be followed.

5.4. Electrical connections

In order to make eventual future service easier and to increase safety, a mains switch must be installed near the appliance. This switch must disconnect the appliance completely from the electrical supply network.

The feedthrough grommet for the connection cable is located on the bottom plate of the base, just under the connection terminal as shown in the installation drawing. In order to make the connection, the lower front panel must be removed. To remove panel loose six screws that are located on the lower (3pcs.) and upper (3pcs.) edge of the panel and then move the panel towards yourself.

5.5. Water connection

Connection to cold water supply must be made by pressure resistant hose (not included in delivery) fitted with G $\frac{3}{4}$ connector. The water connection must be fitted with shut-off valve and non-return valve (not included in delivery).

The length of water hose must be sufficient to compensate movement of connection point in up- and downward direction for bratt pan models with adjustment of working height.

Rinse the water hose before making the water connection.

5.6. Test-run

Besides the live electrical parts also look out for possible moving mechanisms in the lower part of the appliance, if there is a need for testing the appliance during installation while the guards or cover plates are detached.

Make sure that the protective grease has been removed from the frying surface before taking the pan into use. See "Preparing the use".

After connecting the cable check the function of the bratt pan.

Check that

- when turning the thermostat knob, both the green and yellow pilot light goes on (two zones in the P 110 models)

The bratt pan model Futura 60, Futura 85 are equipped with safety thermostat. Bratt pan model Futura 110 is equipped with two safety thermostats. Safety thermostat prevents bratt pan from overheating if main thermostat does not switch off heating elements.

After installation of the bratt pan during test-run check the condition of safety thermostat. If after turning the main thermostat knob at desired temperature green pilot lamp goes on but yellow pilot lamp remains off than safety thermostat need to be reset. Contact an authorized service person to reset safety thermostat.

- the yellow pilot light goes off after a few minutes when the frying surface has reached the set temperature
- the limit switches of the heating work properly: when tilting the heating is switched off, the return movement stops when the pan reaches the base and the heating is switched on. If necessary, adjust the limit switches.
- before refitting the front panel, check that no wires in the base interfere with moving parts.

Refit the lower front panel.

6. Troubleshooting

If the appliance does not function, check the following:

- Has the appliance been used according to the instructions?
- Are all possibly removable parts refitted?
- Are the mains switch on the appliance or nearby - often on the wall - in the ON position?

If even this does not help, figure out in advance how to briefly describe the break-down and contact an authorized service person.

The appliance does not include any user serviceable parts inside. Service must be left to authorized service personnel.

3/PE AC 440V 50-60Hz	9,6	12,6	3x16	4G1,5	DG-TPE36
3/PE AC 480V 50-60Hz	12,5	15,0	3x16	4G1,5	DG-TPE36

1. Electric power connection of machine.
2. Floor drain (not included in delivery).
3. Connection to compressed air.
4. Fixing screws M10x12 (4pcs.) for connection of pan to wall brackets.
5. Cold water connection. Must be fitted with cut-off valve. Length of connection hose must provide deviation of height while adjustment.
6. Height adjustment, water tap, air curtain pipe are optional and are included in delivery only if were indicated by order.

ELECTRIC SUPPLY	P/KW	I/A	FUSE/A	Power cable (number of cores x mm ² per conductor)	Membrane grommets size
