Automatic coffee machine Metos Egro Next Pure-Coffe

Metos Egro Next Pure Coffee is an automatic espresso machine that combines clock-accurate, Swiss filtration technology with modern design and extreme ease of use. The machine has two bean hoppers, 1 kg each, and a recommended daily capacity of 250 cups. The width of the device is only 300 mm, so it can be installed in a really small space. In this Egro Next model, the standard drinks are espresso, Café crema and Café Americano. With the help of an optional powder container, cocoa and specialty coffees made from milk powder can also be added to the beverage selection.

Metos Egro Next, which makes coffee from fresh beans, offers an easy way to offer customers the most popular specialty coffees, always of uniform quality and without unnecessary waiting. The 10-inch touch screen allows you to select coffee with large icons. In the design of the device, special attention has been paid to the fact that coffee portions are always of uniform quality and that the promised capacity is also realized during peak hours. The machine has separate boilers to heat the water needed for drinks and to produce steam. The bean grinder is self-adjusting and has long-lasting, titanium-coated grinding blades.

Thanks to the large bean hoppers and the informative interface, adding raw materials, emptying the waste bin and cleaning routines take just a few minutes a day. Technical data, images or videos can be downloaded via the USB port. You can also control the functions of the device, view operating data and transfer programs from one device to another by phone. Alarms can also

be routed to the phone to provide remote information that the device needs user intervention. Metos Egro Next is suitable for restaurants, hotels, conference rooms, staff dining and destinations where high-quality specialty coffees are an important part of the assortment. Thanks to its quiet running sound, compact size and easy cleaning, the Metos Egro Next is also suitable for office use.

- recommended daily capacity is 250 cups of coffee
- hourly capacity 125 espresso cups
- two coffee bean hoppers, total volume 2 x 1 kg beans
- waste container emptying interval: about 40 coffee cups
